

Key Features & Benefits of Tri-Tek Pressure Reduction Technology:

It has been proven that when sitting with an open hip angle¹ there is less pressure on the lumbar area therefore promoting a standing like posture which is the ideal curve of the spine.

- When sitting in a Tri-Tek chair the tear drop shape internal foam cores placed under the ischial tuberosities are contoured internally to 'flex' which balances the weight of the user to under the ischial tuberosities² therefore opening the hip and putting less pressure on the lumbar area.
- The unique contouring of the seat and waterfall front acts as a forward seat tilt³ without feeling like you are slipping out of the chair. This also assists to open the hip and balance your head, spine and pelvis and promote and healthy 'S' curve in the spine.
- ^Patented design
